A: The correct syntax for copy-and-paste is like this: `cat my-script.sh` This creates `my-script.sh` with the contents of `my-file-name.sh`. To create a file with a different name (say, `-my-script.sh`), you'd do `cat -my-script.sh` --- title: "Delete query Server Management Group | Microsoft Docs" description: "" keywords: ms.date: 03/15/2019 ms.assetid: dbe29b0c-bca8-4d95-9c12-00b0b6518b04 ms.openlocfilehash: 0d6ef4bf30a7e33d6f114eed894f9df74d0fe5e0 ms.sourcegitcommit: 5b475c1855b32cf78d2d1bbb4295e4c236f39464 ms.translationtype: MT ms.contentlocale: es-ES ms.lasthandoff: 09/24/2020 ms.locfileid: "91110755" --- # Delete query Server Management Group Elimina el grupo de administración de llamada de consultas de última generación del servidor. ## Sintaxis ``sql [DELETE FROM ServerManagementGroup] `` ## Parámetros |Nombre del parámetro|Tipo de parámetro|Descripción| |-----|-----|-----| |[DELETE FROM ServerManagementGroup](../././././r/unix/server-management-group-delete.md)*|Nul, especifica la tabla|Delete the [ServerManagementGroup](../././././r/unix/server-management-group.md) object|
